

Release Notes

Changes in 10.9.0

Released June 15, 2022

ID	Function	Description
MARS-2616 MARS-2588	Auto Email	Fixed: When saving a new auto email and selecting the "---more---" option in the list of contacts, or when converting a saved search into an auto email, the form would display an alert that no To email address was specified.
MARS-2566	Concierge	Fixed: The text field at the bottom of the Concierge Approvals page which allows an agent to add a custom message to email which sends these approved listing(s) did not display correctly nor show its intended placeholder text
MARS-2426 MARS-2476	Contacts	Minor changes to the structure of Contact list and details screens, mostly under the hood and transparent to end users, save that the Delete button for saved searches and auto emails within a contact record have been moved to the bottom of the expanded record.
MARS-2368	Data Checker	Integration with CoreLogic's Listing Data Checker now supports separate LDC accounts per-association for regionalized MLS systems. <i>Requires Configuration</i>
CORE-1637	Media Manager	Fixed: When dragging listing photos to reorder them, an image's URL would get populated into another image's description field if the user "dropped" the photo in that field.
MARS-2635	Navigation	Fixed: On responsive pages such as Contacts, clicking an option in the main navigation bar such as "Search" would not display the associated "index" or "summary" page.
CORE-2098	OneHome	Fixed: Agent photos used in OneHome would expire if nothing in the agent's profile or core roster data had been modified in over three months.

CORE-1887	Settings	Agent branding fields on the My Information and OneHome tabs now support up to 200 characters, rather than the previous limit of 60.
CORE-2002	Settings	The word "OneHome" has been removed from the names of all branding fields on the OneHome tab in Settings to avoid minor confusion and redundancy.
DRT-1904	Settings	The agent photo on the OneHome tab of My Information now displays at a smaller size to more easily see and access the fields beneath it.
MARS-2594	UX/UI	In the Recent Searches list, the blue bar displayed on the left edge to identify searches which were created that day has been removed because few users understood what it indicated, and a number of customers had already removed it via custom styling.
