Release Notes

Changes in v11.0.0

Released August 24, 2022

ID	Function	Description
CORE-2186	Contacts	Fixed: On a contact Details tab, the "Phone" label always displays even when there is no value
CORE-1904	Maps	On the search map, the ability to click a location to select its boundary as a search polygon is now supported by more layers, and can be supported by many layers custom to the MLS as well. Additionally, should the MLS want to disable this feature for certain layers which have it now, that is now an option. *Configuration required*
CORE-2128	Maps	Fixed: On the search map, when more than one clickable boundary layer is displayed, clicking a location to select its boundary as a search polygon sometimes results in duplicate "did you mean…" options.
	OneHome	**KEY NEW FEATURE –** Agents can now select listings in their search results and generate a shareable link to view those listings in OneHome. *See full details in the Shareable OneHome Links section above.*
CORE-2152	RestB.ai	Integration with RestB.ai to automatically populate "Image Of" labels when listing images are uploaded now uses their new and improved v2 RoomType model
	Search	**KEY NEW FEATURE** – An all-new search interface which uses a three-panel design that shows the search criteria, map, and search results simultaneously, *See full details in the Multi-panel Responsive Search section above. Requires Configuration*
