

Release Notes

Changes in 10.9.2

Released August 26, 2022

ID	Function	Description
CORE-2298	Contacts	On the Contacts list, some column headers now collapse from text labels to icons at smaller screen sizes to prevent unnecessary horizontal scrolling. <i>(also added in 10.8.6)</i>
MARS-2869	Media	The MLS may now define whether “Image Of” labels applied to listing photos (e.g., Aerial View, Bedroom, Courtyard) should display in Matrix as part of the image caption. Options include displaying “Image Of” only when the listing agent has not entered a more descriptive caption, or always displaying it and treating it as a prefix when a longer description does exist. <i>(also added in 10.8.6)</i>
CORE-2278	OneHome	Added support for the OneHome Agent Portal so that all links to OneHome in agent’s copies of emails and from within the Matrix application take the agent directly to the Agent Portal if that feature is enabled. <i>(also added in 10.8.6)</i>
