

Release Notes

Changes in v11.0.1

Released September 7, 2022

ID	Function	Description
CORE-2310	Contacts	Fixed: When a contact removes a listing from their Discards in OneHome the recent activity widget on the contact Details page in Matrix incorrectly identifies it as a listing being unfavorited
CORE-2348	Contacts	Fixed: OneHome PropertyFit scores do not display in Matrix for a contact with a mixed-case email address, even when that contact has a PropertyFit profile in their OneHome account
MARS-2901	RestB.ai	Integration with RestB.ai to automatically populate “Image Of” labels when listing images are uploaded now supports an option to populate the type as “Other” when RestB.ai returns a low confidence level. This helps ensure that all images have a label while avoiding egregiously mislabeling any images.
